

Job Title: Full-Stack AI-Augmented Developer

At least 1-2 Years of Experience in Web Development

We are seeking a highly skilled and forward-thinking Full-Stack Developer to join our dynamic team. In this role, you won't just write code; you will orchestrate it. We are looking for a developer who excels at "**Vibe Coding**" leveraging advanced AI coding assistants like Claude Code, Claude Cowork, GitHub Copilot, and Cursor to **rapidly** prototype, build, and deploy high-quality software. You will be responsible for the entire software development lifecycle, from system architecture and database design to final deployment, ensuring our solutions effectively solve user pain points.

Key Responsibilities

- **AI-Driven Development:** Lead the implementation of AI-augmented workflows. Use tools like Claude Code/Cowork and Cursor to accelerate development cycles, refactor legacy code, and maintain high code quality.
- **Full-Stack Engineering:** Build, maintain, and optimize robust frontend and backend services using C# .NET, Node.js, NestJS, and Python.
- **System Design:** Design and manage scalable database architectures using both SQL Server and PostgreSQL.
- **Lifecycle Management:** Manage the full software development lifecycle (SDLC) using modern CI/CD pipelines (GitLab, Jenkins).
- **Collaboration:** Work closely with cross-functional teams to translate business requirements into technical solutions that address critical user pain points.
- **Problem Solving:** Debug, optimize, and support applications in a fast-paced environment.

Required Qualifications

- Bachelor's or Master's degree in Computer Engineering, Computer Science, IT, or a related field.
- Not exceeding 30 years old.
- Minimum 2+ years of experience in professional web development.
- **AI-Powered Coding Proficiency:** Expert-level ability to use AI coding agents (Claude Code, Claude Cowork, Cursor, GitHub Copilot). You must be able to direct and orchestrate AI assistants using natural language to produce clean, production-ready code.
- **Technical Stack:** Strong hands-on experience with C# .NET, NodeJS/NestJS, and Python.
- **Tooling Mastery:** Proficient with Visual Studio / VS Code, Postman, and CI/CD tools like GitLab and Jenkins.
- **Database Expertise:** Proven ability to design and manage relational databases (SQL Server and PostgreSQL).
- **Fundamentals:** Deep understanding of software architecture, data structures, algorithms, and secure coding practices.

Nice-to-Have (Bonus Skills)

- AI Application Development: Experience building or integrating AI-powered features using Google AI Studio, n8n, or Open Web UI.
- AI API Integration: Experience developing applications that consume LLM APIs (OpenAI, Anthropic, etc.) to deliver intelligent user experiences.
- UI/UX: Knowledge of frontend design principles for modern web applications.
- Performance Tuning: Familiarity with browser tuning and backend performance optimization techniques.

Why Join Us?

- Work at the cutting edge of software development, where AI-human collaboration is at the core of our culture.
- Opportunity to influence our internal development practices and adopt the latest industry tools.
- A collaborative environment that values efficiency, creativity, and the ability to solve complex problems using modern technology.
